Our practice provides complete and therapeutic services to children with esophageal, gastrointestinal, liver, pancreatic, and nutritional disorders, including:

- Abdominal Pain
- Biliary Tract Disease
- Celiac Disease
- Childhood Obesity
- Crohn's Disease
- Constipation
- Diarrhea
- Eosinophilic Esophagitis
- Failure to Thrive
- Gastroesophageal Reflux Diseases (GERD)
- Gastrointestinal Bleeding
- Inflammatory Bowel Disease
- Intestinal Allergies
- Jaundice
- Malabsorption
- Pancreatic Disorders
- Ulcerative Colitis
- Viral Hepatitis
- Vomiting

Other areas of expertise include:

- Bravo and pH Probe Placement
- Capsule Endoscopy
- Endoscopy and Colonoscopy
- Fecal Microbiota Transplant
- Gastronomy Tube Placement
- Hydrogen and Methane Breath Testing for Bacterial Overgrowth and Lactose Intolerance
- Impedance/pH Testing
- Pediatric Motility
- Polypectomy
- Pouchoscopy

The Division of Pediatric Gastroenterology & Nutrition is active in the education of medical students, residents and fellows, as well as continuing medical education programs.

**Services & Programs**
The Division of Pediatric Gastroenterology & Nutrition provides specialized, multi-disciplinary care for children and adolescents.

**Pediatric Aerodigestive Program**
The Pediatric Aerodigestive Center provides care for children with complex medical problems involving the airway, lung and the upper gastrointestinal (aerodigestive) tract. We bring together a multidisciplinary team in a single location to care for your child.

- To make an appointment, call 646-962-3410

**Pediatric Inflammatory Bowel Disease (IBD) Program**
Inflammatory bowel disease (IBD) is a chronic inflammation of the lining of one's intestines.
Crohn's disease and ulcerative colitis are the two main types of IBD, with Crohn's generally affecting the small intestine, and ulcerative colitis causing inflammation in the large intestine, or colon. Living with an IBD diagnosis as a child or teen can be especially hard, with educational and social stressors to deal with alongside the array of symptoms caused by IBD, including bleeding, frequent stools, cramping, fatigue, and even arthritis. Our multi-disciplinary specialists help young patients with IBD to manage their disease, so they can continue to live full lives in childhood, adolescence, and beyond.

- To make an appointment, call 646-962-3869

**Pediatric Food Allergy Program**

Food allergies or food intolerance can range from mild to severe, and determining the cause can often be challenging. Our pediatric gastroenterologists specializing in food allergies and intolerances work with a multidisciplinary team of experts who help diagnose young patients and customize a treatment plan for each child.

- To make an appointment, call 646-962-3869

**Pediatric Motility Program**

If your child has problems with motility — the coordinated contraction and movement of the digestive tract — we know how much these problems can interfere with your child's and your family's quality of life. Children can develop motility disorders that range from relatively benign conditions such as constipation to more serious disorders such as Hirschsprung's disease. Our goals are to find out the reasons for your child's symptoms, and to provide you with an effective, practical treatment or management plan.

---

**Diagnosis & Treatment**

**Upper and Lower Endoscopy**

Endoscopy is a procedure that allows a Gastroenterologist to look at the inside of the gastrointestinal tract using an endoscope. An endoscopy is performed to discover reasons for problems including swallowing difficulties, bleeding, indigestion, abdominal pain, nausea, vomiting, reflux, chest pain or diarrhea.

- Learn more: [Tip Sheet: Upper and Lower Endoscopy](#)

**Capsule Endoscopy**
Capsule endoscopy is used to look at the inside lining of the small intestine. Conventional upper endoscopy will only visualize the beginning of the small intestine and colonoscopy will only visualize the end of small intestine. Capsule endoscopy is a way of bridging that gap.

Learn more: Tip Sheet - Capsule Endoscopy pH Probe Study
A pH probe study is designed to assess acid reflux in your child. Sometimes this study can be performed "with impedance," which means that it will also detect non-acid reflux.

Our Team

Dr. Robbyn Sockolow
Chief, Pediatric Gastroenterology
Director, Pediatric IBD Center
Professor of Clinical Pediatrics
Attending Pediatrician
View Dr. Sockolow's Profile

Dr. Elaine Barfield
Associate Program Director, Pediatric Gastroenterology & Nutrition Fellowship Program
Assistant Professor of Pediatrics
Assistant Attending Pediatrician
View Dr. Barfield's Profile
Dr. Kimberley Chien
Clinical Director, Outpatient Pediatric Gastroenterology Clinic
Director, Pediatric Inflammatory Bowel Disease Transition Program
Assistant Professor of Pediatrics
Assistant Attending Pediatrician
View Dr. Chien's Profile

Dr. Thomas Ciecierega
Director, Pediatric Motility Program
Co-Director, Pediatric Aerodigestive Program
Director, Pediatric Endoscopy Unit
Assistant Professor of Pediatrics
Assistant Attending Pediatrician
