The Pediatric Oncology Program at Weill Cornell Medicine provides up-to-date comprehensive care to children and adolescents with all forms of childhood cancer.

Our specialists have extensive expertise in leukemias, lymphomas and sarcomas of bone and soft tissue. We are original members of the Childrens Oncology Group (COG), which is the premier multi-center pediatric cancer clinical trials group. Through COG our patients have access to the latest targeted and molecular cancer agents.
A child life therapist and an art therapist provide invaluable support to children and families getting their treatment in our newly renovated facility.

**Services & Programs**

- **Pediatric Cancer Program:** Focuses on treating children and adolescents with a variety of malignancies, with a focus on lymphoma or leukemia. An integrated team including physicians, a nurse practitioner, social worker, and child life therapist makes the experience as comfortable as possible for the child and family.

- **Adolescent and Young Adult (AYA) Lymphoma Program:** provides tailored therapy to this group of patients. We provide comprehensive diagnostic evaluation, treatment, and follow-up care. Our center features a special program — in collaboration with lymphoma specialists in adult oncology — for young adults with lymphoma, who generally have better results when treated using pediatric therapies.

- **Childhood, Adolescent and Young Adult Survivorship and Late Effects Program:** This program provides ongoing care to survivors of pediatric and young adult cancers after completion of therapy for complications from their treatment, and the effects of surgery, radiation, or chemotherapy that was administered.

**What to expect**

---

**Research**

Researchers in our program are studying the biology of cancer, with special emphasis on the development of lymphomas and tumor metastasis. These efforts have a translational focus, with the goal of using the information gathered to design more targeted therapies.

Eligible patients may have opportunities to participate in clinical trials of promising new therapies.
