The Weill Cornell Autism Research Program (WCARP) is a multi-institutional collaborative effort committed to advancing our knowledge of Autism Spectrum Disorders (ASD). Our mission is to gain a better understanding of the neurobiological basis of ASD, and to support development of new diagnostic markers and treatments for patients with autism.

Research Highlights
A study published in eNeuro shows that the death of newborn brain cells may be linked to a genetic risk factor for five major psychiatric diseases, including: schizophrenia, bipolar disorder, autism, ADHD and depression. The study, which has identified a new function for one of the most important genes in psychiatric illness, is led by Anjali M. Rajadhyaksha, Ph.D., WCARP Director, and Andrew A. Pieper, M.D., Ph.D., Professor of Psychiatry at the University of Iowa Carver College of Medicine.
