

Astro Tower

Client: Luri 1 + Luri 2

Architect: Altiplan Architects, Estudio Lamela

This office tower, situated in the centre of Brussels, was constructed in 1974. The renovation of this icon will change the skyline of Brussels significantly.

The Astro Tower will be the largest passive building in Brussels, and also one of the first passive office towers in Europe.

The tower has 33 floors above ground, of which 30 floors will be used as office space.

27.000 m² will be used by the public services of VDAB, Actiris, and Bruxelles Formation. These services will receive about 140.000 visitors each year in this building.

One of the largest meeting centers, 250 m², is located on the 30st floor.
