

Building Engineering
and Sustainable Development

't Sas

Client: Matexi

Architect: A2O Architecten

This residential project consists of 138 apartments, and is the first part to be built within the scope of the '4 Fonteynen' project of Matexi, situated on the former 'Watersite' site in Vilvoorde. All the apartments are designed in a way that there is sunlight coming in during all day, having a double orientation and hence a very high energy efficiency level.

In addition to the apartments, there is 1 retail area, and an underground parking area for 197 cars, and also a semi-public patio garden.
